

参考文档:[1. DeepSeek-R1 — \[野火\]嵌入式 AI 应用开发实战指南—基于 LubanCat-RK 系列板卡 文档](#)

前面问题都不大，正常执行就可以，下面的命令不能直接复制运行，安装 rkllm_toolkit 的时候要对应文件夹内的.whl

```
# 切换到rkllm-toolkit目录, 安装rkllm_toolkit
cd rknn-llm/rkllm-toolkit
(rkllm_1.1.4) llh@llh:/xxx/rkllm-toolkit$ pip3 install rkllm_toolkit-1.1.4-cp310-cp310-linux_x86_64.whl
...
```

然后就是导出问题，运行 python export_rkllm.py 报错，如下：

```
from .arrow_dataset import Dataset
File "/home/dev/anaconda3/envs/rkllm_1.1.4/lib/python3.10/site-packages/datasets/arrow_dataset.py", line
7, in <module>
    from .arrow_writer import ArrowWriter, OptimizedTypedSequence
File "/home/dev/anaconda3/envs/rkllm_1.1.4/lib/python3.10/site-packages/datasets/arrow_writer.py", line
, in <module>
    from .features import Features, Image, Value
File "/home/dev/anaconda3/envs/rkllm_1.1.4/lib/python3.10/site-packages/datasets/features/__init__.py",
ne 18, in <module>
    from .features import Array2D, Array3D, Array4D, Array5D, ClassLabel, Features, Sequence, Value
File "/home/dev/anaconda3/envs/rkllm_1.1.4/lib/python3.10/site-packages/datasets/features/features.py",
ne 634, in <module>
    class _ArrayXDEXTensionType(pa.PyExtensionType):
AttributeError: module 'pyarrow' has no attribute 'PyExtensionType'. Did you mean: 'ExtensionType'?
```

看来一下是 pyarrow 版本太高了导致的

pip install pyarrow==11.0.0 降回 11.0.0 就行。
